Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the instant application:

What is claimed is:

1.   (Currently Amended)   A method of call conferencing using a voice browser comprising:

      establishing a voice browsing session between a calling party and the voice browser;

      receiving an inbound call from an additional party;

      determining based upon a calling signal corresponding to the inbound call whether said inbound call is directed to the voice browser for which the voice browsing session has been established;

      determining whether the voice browser is configured to accept inbound calls associated with the calling signal; and

      if said inbound call is directed to the voice browser, and if the voice browser is configured to accept inbound calls associated with the calling signal, adding said inbound call to said voice browsing session, said adding providing a voice communications link between said calling party and said additional party.

2.   (Previously Presented)   The method of claim 1, wherein said adding step conferences selected ones of a plurality of additional parties into said voice browsing session.

3.   (Currently Amended)   The method of claim 1, wherein said adding step comprises:

~~determining whether said inbound call is associated with an active voice browsing session; and~~

~~if an identifier is associated with an active voice browsing session,~~ routing said inbound call to the voice browser <u>based upon the calling signal</u> ~~associated with said active voice browsing session~~.

4.   (Currently Amended)   The method of claim 3, wherein said adding step further comprises:

determining whether the voice browser ~~associated with~~ <u>to which</u> said inbound call <u>is directed</u> is configured for multiple callers.

5.   (Previously Presented)   The method of claim 3, wherein said adding step further comprises:

aggregating a voice data stream of said additional party with a voice data stream of said calling party into a single voice data stream; and

sending said single voice data stream for processing to the voice browser.

6.   (Previously Presented)   The method of claim 3, wherein said adding step further comprises:

sending audio from the voice browser to said calling party and said additional party.

7.   (Currently Amended)   A machine-readable storage, having stored thereon a computer program having a plurality of code sections executable by a machine for causing the machine to perform the steps of:

establishing a voice browsing session between a calling party and the voice browser;

receiving an inbound call from an additional party;

determining based upon a calling signal corresponding to the inbound call whether said inbound call is directed to the voice browser for which the voice browsing session has been established;

determining whether the voice browser is configured to accept inbound calls associated with the calling signal; and

if said inbound call is directed to the voice browser, and if the voice browser is configured to accept inbound calls associated with the calling signal, adding said inbound call to said voice browsing session, said adding providing a voice communications link between said calling party and said additional party.

8.   (Previously Presented)   The machine-readable storage of claim 7, wherein said adding step conferences selected ones of a plurality of additional parties into said voice browsing session.

9.   (Currently Amended)   The machine-readable storage of claim 7, wherein said adding step comprises:

~~determining whether said inbound call is associated with an active voice browsing session; and~~

~~if an identifier is associated with an active voice browsing session,~~ routing said inbound call to the voice browser based upon the calling signal ~~associated with said active voice browsing session.~~

10.   (Currently Amended)   The machine-readable storage of claim 9, wherein said adding step further comprises:

determining whether the voice browser ~~associated with~~ to which said inbound call is directed is configured for multiple callers.

11.   (Previously Presented)   The machine-readable storage of claim 9, wherein said adding step further comprises:

aggregating a voice data stream of said additional party with a voice data stream of said calling party into a single voice data stream; and

sending said single voice data stream for processing to the voice browser.

12.   (Previously Presented)   The machine-readable storage of claim 9, wherein said adding step further comprises:

sending audio from the voice browser to said calling party and said additional party.

13.   (Previously Presented)   A method of call conferencing using a voice browser comprising:

establishing a voice browsing session between a calling party and the voice browser;

receiving an inbound call from an additional party;

identifying a dialed number identification service (DNIS) within said inbound call;

determining based upon the DNIS whether said inbound call is directed to the voice browser;

determining whether the voice browser is configured to accept inbound calls for the DNIS; and

if said inbound call is directed to the voice browser, and if the voice browser is configured to accept inbound calls for the DNIS, routing said inbound call to the voice browser based upon the DNIS[[;]], and adding said inbound call to said voice browsing session, said adding providing a voice communications link between said calling party and said additional party.

14.   (Previously Presented)   The method of claim 13, wherein said adding step conferences selected ones of a plurality of additional parties into said voice browsing session.

15.   (Cancelled)

16.   (Currently Amended)   The method of claim [[15]] 13, wherein said adding step further comprises:

        determining whether the voice browser associated with said inbound call is configured for multiple callers.

17.   (Currently Amended)   The method of claim [[15]] 13, wherein said adding step further comprises:

        aggregating a voice data stream of said additional party with a voice data stream of said calling party into a single voice data stream; and

        sending said single voice data stream for processing to the voice browser.

18.   (Currently Amended)   The method of claim [[15]] 13, wherein said adding step further comprises:

        sending audio from the voice browser to said calling party and said additional party.

19.   (Previously Presented)   The method of Claim 13, further comprising receiving another inbound call from another additional party and identifying a DNIS within the

other inbound call to determine whether the voice browser is configured to accept inbound calls for the DNIS within the other inbound call.
